

It's not a matter of if you will experience a security breach or attack, but a matter of when a security breach will happen. If your organization isn't prepared, the result can be catastrophic to your business, and potentially to your customers.

The Myth: only the largest companies are targeted and impacted by security breaches. **The Truth:** over 70% of cyber-attacks are on small to mid-size businesses. These businesses are frequently well stocked with sensitive data, and often lack the resources and protections the large, multi-national enterprises have.

Hackers across the globe are actively searching for vulnerable companies to leverage sensitive data like credit card information, customer names, addresses, and even social security numbers. These threats can take a variety of forms. Ransomware, malware, and phishing, and other vulnerabilities can be hard to catch without trained professionals looking for them.

AZTS is committed to helping your company harden its defenses. Our team of professionals has over 100 years of combined experience in training, IT controls, risk management, and forensic accounting. Our goal is to help our clients be aware, secure, and ready to respond to the threats.

- Compliance - HIPAA/HITECH, FAR, DFAR, PCI DSS, and GCBA
- NIST Assessments
- Security Awareness Training
- Dark Web Monitoring
- Email Security & Encryption
- Network Vulnerability Testing
- Disaster Recovery and Business Continuity Planning
- Service Organization (SOC) Reports
- Patch Management
